Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Petre et al (US 7,158,558) in view of Onggosanusi et al (US 2002/0196842).

Regarding claims 1, 6, 7, 11, 12, 17 and 18, Petre discloses a method of communication using a common pilot channel (CPICH) in a W-CDMA receiver (column 1, lines 19-34). The receiver receives the CPICH (column 13, line 34 to column 14 line 2). The signal is equalized using chip level equalization and the equalized CPICH channel is despread (column 6, line 62 to column 7, line 12 and figure 3). Petre does not discloses estimating the signal to interference ratio (SINR) from the despread CPICH. Onggosanusi discloses the W-CDMA receiver shown in figure 3. The CPICH channel is despread in the receiver (paragraph 0056). The SINR is determined from the despread CPICH channel in the basis selector 84 (paragraph 0069). This value is input to the joint interference cancellation and detector unit 88 in figure 3. The removal of the channel effect is advantageous since it allows the originally transmitted data to be properly recognized and recovered (paragraph 0006). For this reason, it would have been obvious for one of ordinary skill in the art at the time of the invention to combine the estimation and interference detection and cancellation method of Onggosanusi in to the method of Petre.

Application/Control Number: 10/792,018

Art Unit: 2611

Regarding claims 2, 8, 13 and 19, the combination discloses the transmitter comprises a single antenna (Petre, figure 8).

Regarding claims 3, 9, 14 and 20, the combination discloses the transmitter comprises multiple antennas (Onggosanusi, figure 3 and paragraph 0049). It would have been obvious for one of ordinary skill in the art at the time of the invention to combine the antenna diversity of Onggosanusi into the method of Petre. Multiple antennas for transmission allow multiple paths to be received at the receiver and fading and other interference can be overcome, which allows the signal to be received with fewer errors.

Regarding claims 4 and 16, the combination discloses the method comprises combining the channel and chip level filtering at the equalizer. A combination of the channel and the receiver's chip level filtering at the equalizer can be seen as a virtual channel.

Regarding claims 5, 10 and 15, the combination discloses oversampling the received signal (Petre, column 15, lines 10-43).

Regarding claim 21, the receiver is in a mobile terminal.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin M. Burd whose telephone number is (571) 272-3008. The examiner can normally be reached on Monday - Friday 9 am - 5 pm.

Application/Control Number: 10/792,018 Page 4

Art Unit: 2611

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jay Patel can be reached on (571) 272-2988. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
